Cell: (647) 741-8577

SUMMARY

Software developer and Game Programming student with professional C/C++ software development experience and extensive independent development experience using C#, Unity, Java, JavaScript, and low-level graphics technologies. Experienced in designing software systems from the ground up, rapid prototyping, procedural generation, networking, debugging, and cross-platform development. Background also includes a Bachelor of Science in Physics and an advanced diploma in Mechanical Engineering Technology.

TECHNICAL SKILLS

Languages:	C#, C++, C, Java, JavaScript, HTML, CSS
Development:	Unity, Qt, LWJGL
Graphics & Multimedia:	OpenGL, OpenAL
Software Development:	Object-oriented programming, networking, procedural generation, deterministic simulation, debugging, prototyping, GUI development, cross-platform development

EDUCATION

Advanced Diploma, Game Programming Centennial College - Toronto, ON	Sep 2025 – Present
• Academic record to date: 9 A+ and 3 A grades • Developing with Unity and HTML/CSS/JavaScript	
Advanced Diploma, Mechanical Engineering Technology Centennial College - Scarborough, ON	Sep 2016 – Apr 2019
• 3.8 GPA • Developing with Java, OpenGL, OpenAL	
Bachelor of Science, Physics York University - Toronto, ON	Sep 2005 – Apr 2010
• Recipient of R.M. Hobson Award, 2007 • Dean's Honour Roll, 2007

GAME PROJECTS

Unity / C# - Multiplayer 3D Game

Aug 2026 – Present

- Developing a multiplayer 3D game from the ground up in Unity and C#
- Built a custom TCP-based client/server networking architecture
- Implemented deterministic simulation testing with per-frame hash checking
- Developed procedural generation systems for various systems
- Created reusable development tools
- Optimized performance and reduced network bandwidth requirements

Unity / C# - Additional Projects

Sep 2025 – Mar 2026

- Developed Gardens of Music
- Prototyped Creature Craft

HTML/CSS/JavaScript - Browser Games

Jul 2026 – Aug 2026

- Designed and developed four complete browser games
- Developed increasingly complex factory and automation-style games

Java / LWJGL Games

Sep 2016 – Jan 2020

- Designed and programmed multiple original 3D games
- Built my own custom game engine technology
- Used OpenGL (Graphics) and OpenAL (Audio) through LWJGL
- Culminated in HM4: Climb the Tower: [Link](#)

PROFESSIONAL EXPERIENCE

R&D Developer

Jul 2011 – Aug 2013

TrySight (formerly Issist Assistive Technologies) - Mississauga, ON

- Served as a primary software developer at a technology start-up in an Agile development environment
- Engineered four main projects throughout the software lifecycle, from requirements and prototyping through deployment and maintenance
- Developed desktop applications, mobile applications, and embedded systems for Windows, macOS, Linux, and Android
- Focused extensively on research and development, proof-of-concept implementation, and rapid prototyping
- Primarily developed in C++ using Qt, with additional work in C, Objective-C, and Java
- Worked with local and offshore team members on software design, implementation, testing, and issue resolution
- Produced clear technical documentation describing software architecture and implementation
- Provided direct technical support to customers and investigated product issues
